

GIT helper document for App Dev Project

This document is a step-by-step guide for the students to create an account on GitHub, create a private repository where they will be maintaining their project source code and add MAD I official ID as a collaborator to your project repository. This document aims to make student understand the importance of version control in tracking the progress of their project and at the same time help App Dev team to track their progress and assist in their project development process.

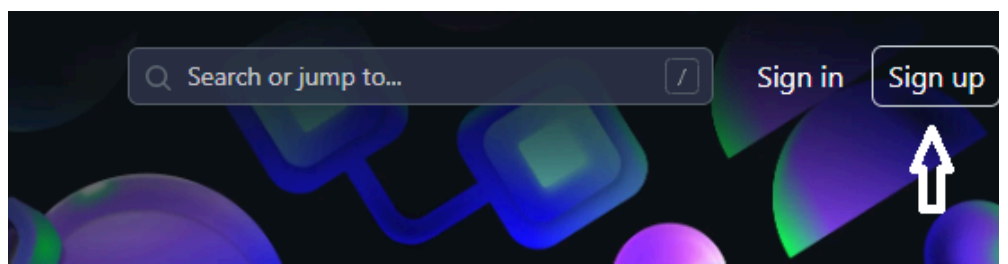

There are two important aspects to this document -

1. Help students to create a private repository to maintain and develop their project, so that they don't accidentally create a public repo and make their project open to everyone.
2. Help them to make MAD I official ID as collaborator to their repository so that App Dev Team can track their progress and guide them in their development journey.

Note: This document will be handy to students from both programming and non-programming background

Step 1: Create an account on GitHub

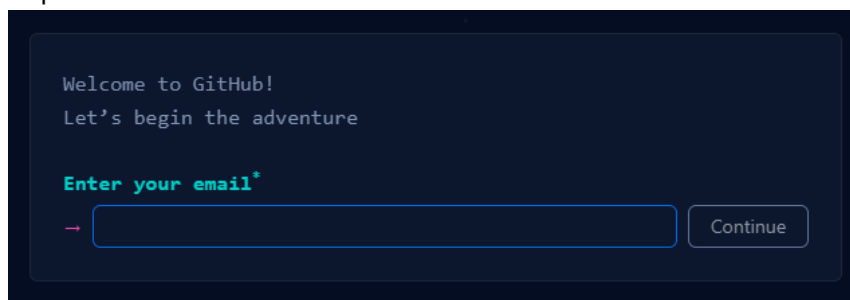

Open GitHub at <https://github.com> and create a new account.

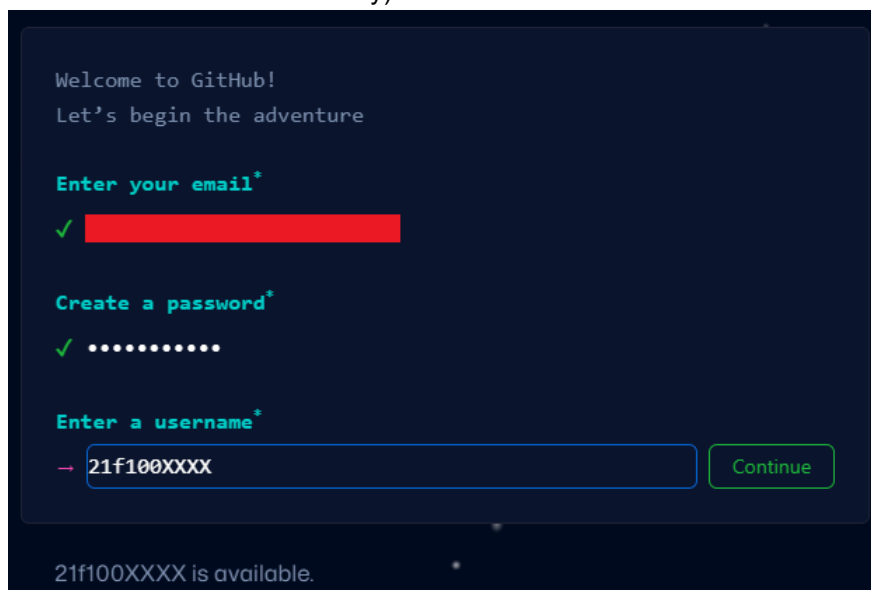

GIT helper document

Updated automatically every 5 minutes

- There will be a prompt to add;
 1. **E-mail** - Students have to use their **BS degree student e-mail ID** with password of their choice or as per the requirements of GitHub.

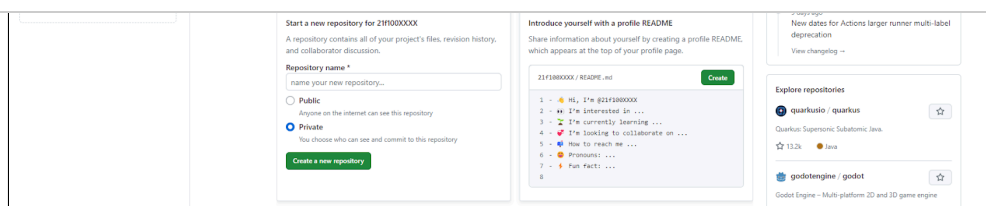

2. **Password** - Create a strong password of your choice with requirements given by GitHub
3. **Username** - The username **must** be your student ID. e.g. 21f100XXXX (with small f for the sake of uniformity)

4. You can tick other requirements and click on continue
- GitHub might verify your e-mail. Once the verification is successful, it will redirect you to the GitHub sign-in page.
 - Sign-in with the given credentials and GitHub will show you a personalization page, you can either provide in the details or skip it.
 - Next, you should be able to see your dashboard with some suggested/recommended repositories (image shown below).

- It will also suggest how you can improve your account by providing documents like “readme.md”. You can ignore for now.

Congratulations, you have successfully created an account on GitHub.

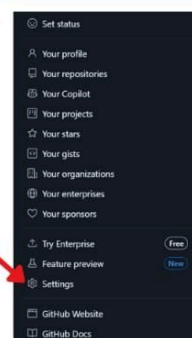

Note: If you already have a GitHub account with a different username, follow the following steps to change your username to your student ID.

Steps to Change GitHub Username

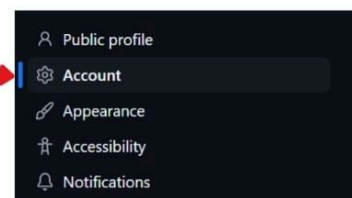

1. Go to Profile

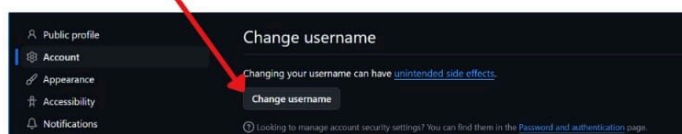

2. Go to Settings

3. Go to Account Section

3. Change Your Username

repositories of your own created. To create a new repository, you can;

- Click on the “Create repository” button in the top left corner of your dashboard, and you will be directed to a page where you can fill in the details of your new repository.

- The details required would include;
- Repository Name:** Give a short and intuitive name to your repository that will help us to understand the course and the project statement that you are working on. If your repo name is a compound word, keep all the words in lowercase separated by hyphen, refer to the image below;

 A screenshot of the 'Create a new repository' form on GitHub. The title is 'Create a new repository'. Below it, a subtitle says 'A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)'. A note states 'Required fields are marked with an asterisk (*)'. There are two main fields: 'Owner *' with a dropdown menu showing '21f100XXXX' and 'Repository name *' with a text input containing 'library-management-syste'. Below the repository name field, a green checkmark indicates 'library-management-system-v2 is available.'. At the bottom, a tip says 'Great repository names are short and memorable. Need inspiration? How about [automatic-winner](#) ?'.

- Description:** Give a concise description of the project statement

 A screenshot of the 'Description' field in the repository creation form. The label 'Description (optional)' is above a text input box. The input box contains the text 'This is a dummy project that allows user to read books online.'

- Private*:** select the private option to create a private repository. It is mandatory to set the repository as private.

 A screenshot of the 'Public' and 'Private' radio button options in the repository creation form. The 'Public' option is selected with a blue circle. Below it, the text says 'Anyone on the internet can see this repository. You choose who can commit.' The 'Private' option is unselected. Below it, the text says 'You choose who can see and commit to this repository.'

This is where you can write a long description for your project. [Learn more about READMEs.](#)

5. Click on “create repository” button by keeping the other fields at their default options

You will be redirected to the repository created. Note the name of the repository and the private tag along with it.

Now, you have created a private repository, fill the mandatory form below before going forward to step 3

MAD-1 form:

<https://forms.gle/578iUF7BgpJSe4SM8> (updated Jan-26)

MAD-2 form:

<https://forms.gle/zwCzjghpxjwJmE3o9> (updated Jan-26)

Step 3: Add the MAD I and/or MAD II user ID as collaborator

To add the official App Dev IDs as the collaborator, you must;

- Select the project repository just created, and you should be able to see the file structure and the code base of the repo.
- Select “Settings” on the options pane shown on the top

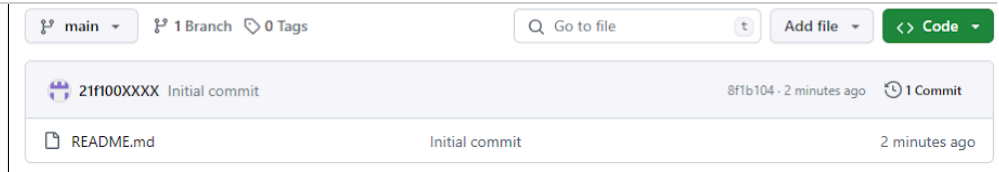

Published using Google Docs

- Select “collaborators” from the top left of the left options pane and click on “add people” under the “Manage access” heading of the page.

Manage access

- Type in the official username of App Dev
 - For MAD I, type MADI-cs2003 and
 - For MAD II, type MADII-cs2006

- After selecting the ID, MADI-cs2003, click on “Add MADI-cs2003 to this repository”
- You will be redirected to collaborators page where you can see all the collaborators, you should be able to see, respective ID added.

MADI-cs2003

Awaiting MADI-cs2003's response

Pending Invite

- Follow the same steps to add MADI-cs2006 as collaborator.

Note: Students doing both MAD I and II projects together have to add both IDs as collaborators, otherwise they can add **only one** collaborator based on their course project.

Congratulations, now you have added us as collaborators to your project, this will help us track the activity of your project and guide you accordingly.

Further Steps

To efficiently track and maintain your project, the project just be locally tracked by git. We have released certain tutorials to help you with that.
